CURING AND PROPERTIES OF EPOXY POLYMERS CONTAINING HEXACHLOROETHANE

Balaeva S.M., Beeva D.A., Altueva A.M., Shetov R.A.

Kabardino-Balkarian State University

The article provides information on the curing of epoxy oligomers containing hexachloroethane with various hardeners, and epoxy polymers with good technological properties have been obtained.

The influence of various factors on the duration of the curing process and the yield of products has been studied. The resulting new filling compounds had good thermal stability.

Keywords: curing, production of epoxy polymers, thermal stability of adhesives
