INFLUENCE OF BIOPOLYMERS ON THE INHIBITION OF NATURAL GAS HYDRATE FORMATION IN MINERALIZED FORMATION WATER

¹Novikov N.S., ²Drachuk A.O.

¹Tyumen State University ²Earth Cryosphere Institute, Tyumen Scientific Centre, Siberian Branch, Russian Academy Sciences

Currently, the issue of gas hydrate formation remains a pressing challenge in Russia across all stages of hydrocarbon production, processing, and transportation. The most common method to prevent undesirable hydrate formation involves using inhibitors – substances that suppress gas hydrate growth. This study investigates the impact of eco-friendly biopolymers on the rate of natural gas hydrate formation in saline water. It was found that the addition of biopolymers reduces the extent of water conversion into natural gas hydrates.

Keywords: gas hydrates, natural gas hydrate, hydrate plugs, field development, gas transportation, biopolymers, hydrate inhibitors
