ASSESSMENT OF THE EFFICACY OF GUANIDINE-CONTAINING BIOCIDAL ADDITIVES TOWARDS DIFFERENT MICROORGANISMS

¹Htoo Myat K.K., ²Gerasin V.A.

¹D.I. Mendeleev Russian Chemical-Technological University ²A.V. Topchiev Institute of Petrochemical Synthesis RAS

Effect of a number of cationic polyelectolytes on the biofouling and physical and mechanical properties of polymer material based on styrene-acrylic water dispersion has been studied. The antifouling properties of the material were tested against gram-positive and gram-negative bacteria as well as micromycetes. The effective concentrations of the additives have been determined for inhibiting the formation of biofilm on the polymer surface.

Keywords: polymer, paint, coating, biocide, polyelectrolyte
